BlueStar File Processing Center 2012 PRICING

BlueStar™ File Processing Center (FPC) is a platform product that is specifically targeting file processing and exchange tasks. It decomposes the file processing programs in the enterprises into standard and general processing units so that administrators can easily define each file's processing flow and reuse most of the existing programs without extra coding efforts.

BlueStar PFC 2012

Price: NT\$650,000/ Per Core

Features:

- Graphical user interface for designing file processing flows.
- Graphical user interface for monitoring and managing running processes.
